

## Modules

### Skid mounted modules

Starting from the pipespools fabrication in our Bremen works and the development of special serial products in close cooperation with our key customers we finally decided to construct also functional modules. Similar to all our products this product follows the idea of reducing installation time on site and offering a superb solution for the needs of the customer.

Qualifications, experienced staff  
and a strong network

Utilizing our know-how and qualifications around piping fabrication we are able to offer any material required for the production of the frame and the required pipelines. Flexibility due to in house fabrication, fitting and assembly by our own staff and the cooperation with professional partners for material supplies, any kind of surface treatment, painting, NDT and electric wiring enables us to keep delivery dates.

Ready for installation-on time-  
Acc. To specification

Based on a complete set of drawings we source, prepare, fabricate, assemble and test the functional module.

Highest quality standards controlled by our Quality management system are met. Drawings will be checked by our experienced engineers and will be modified if needed. Sourcing of materials from reliable and qualified supplies secures quality and delivery time.

### Facilities

Door openings and hoisting facilities are the limitations for the size of the modules.

We can offer a weight of max. 10 tons and a length, width, height of 6 x 3 x 4 m.

### In house testing, inspected and approved

Functional tests, leakage and electrical tests are performed out in our works. Also the items fabricated by us are inspected and NDT controlled. We even offer the precise measurement by a FARO measuring gauge. Approved and independent third parties are available to witness and confirm the tests.

### Approvals

DIN EN ISO 9001:2008  
Germanischer Lloyd for welding of pipes of all classes  
PED 97/23/EC / AD2000 HPO/R100  
DIN 2303-Q2-BK1
